

Mo Track ER Diagram, Database Diagram and Flow

Firestore + Zoho Books integration overview

Key relationships

- Customer has many deals; deals hold quotations, visits, measurements and receipts.
- Approved quotation converts into top-level orders/{orderId}.
- Purchase requests and inbound receiving add stock into stocks and lengths.
- Invoice generation reads order allocation and stock references, then creates Zoho invoice.

Firestore Database Diagram

Main collections and nested collections

CRM / Sales

- users/{userId}
- customers/{customerId}
- customers/{customerId}/deals/{dealId}
- deals/{dealId}/quotations/{quotationId}
- deals/{dealId}/visits/{visitId}
- deals/{dealId}/measurements/{measurementId}
- deals/{dealId}/receipts/{receiptId}
- Walkin_Customer/{leadId}
- companyVisits/{visitId}
- salesmanCrmAssignments/{salesmanName}

Orders / Purchase / Inventory

- orders/{orderId}
- purchaseRequests/{purchaseRequestId}
- inbounds/{inboundId}
- stocks/{stockId}
- stocks/{stockId}/lengths/{lengthId}
- stocks/{stockId}/lengths/{lengthId}/reservedQty/{reservationId}
- PendingPurchaseEntry/{entryId}
- Cutting/{taskId}
- taxDetails/{taxId}
- o2d/{o2dId}

Invoice / Zoho / PMS / HR

- invoices/{invoiceId}
- zohoTokenDetails/{docId}
- jobs/{jobId}
- jobs/{jobId}/workLogs/{logId}
- plan/{planId}
- machines/{machineId}
- people/{personId}
- products/{productId}
- machineSkills/{skillId}
- hrLeaveRequests/{requestId}

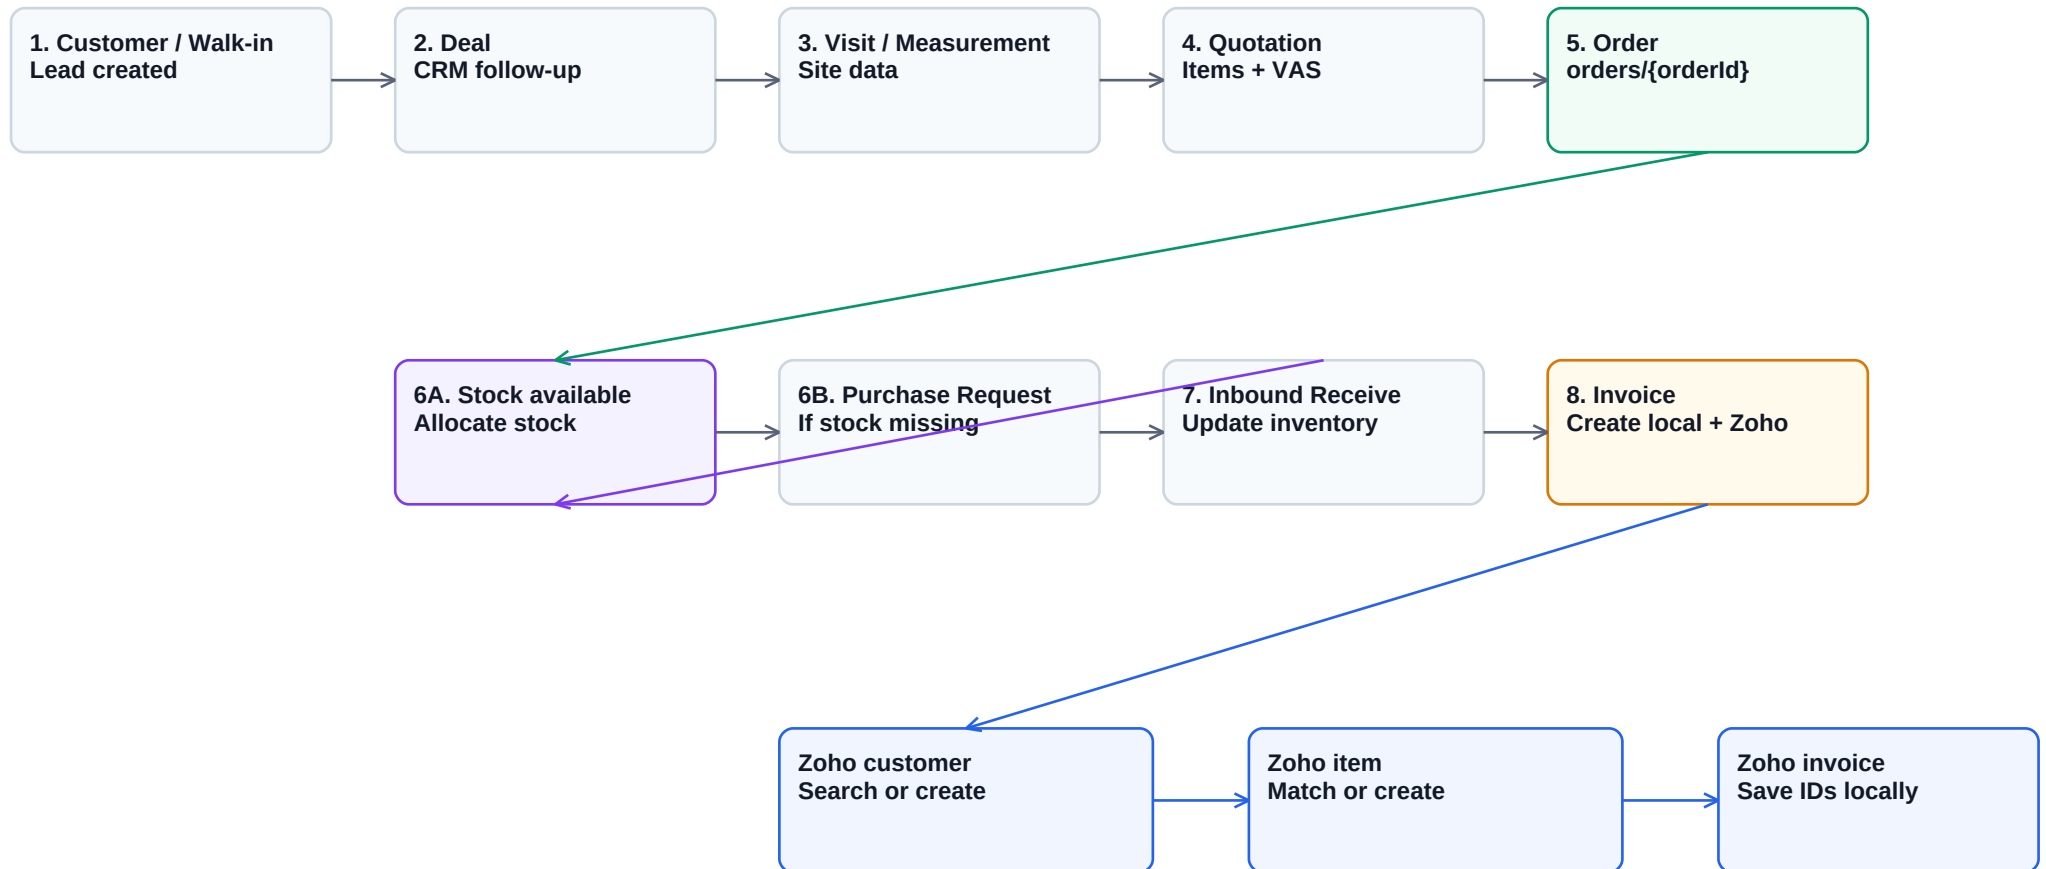

Stock List source
/adminDb.collection("stocks")
Total Qty = stocks/{stockId}.totalQty
Available = availableQty
Reserved = reservedQty

Invoice source
orders/{orderId}
sections.NORMAL.items
allocation.lengths
invoices/{invoiceId}

Zoho source
Zoho Books API
customers/items/invoices/PO
linked by zoho* IDs

Business Flow

Customer to invoice to Zoho

Inventory and Zoho Flow

Where quantities and external IDs come from

Inventory quantity source

- Stock List table reads from Firestore stocks collection.
- Total Qty column uses stock.totalQty. Legacy/import fallback may use quantity or closingstock in exports.
- Available, Reserved, Damaged and Cut use availableQty, reservedQty, damagedQty and cutQty.
- Roll/length data lives under stocks/{stockId}/lengths/{lengthId}.
- Receiving material through inbound calls updateStockQuantityAction and writes stocks + lengths.

Zoho connection

- Zoho is not the inventory source for Stock List.
- Zoho is used during invoice/PO generation.
- Customer matching uses Zoho customers and stores zohoCustomerId.
- Item matching uses Zoho items and stores zohoItemId on invoice lines.
- Invoice creation stores zohoInvoiceId and zohoInvoiceNo in Firestore invoices.
- Purchase PO creation stores zohoPurchaseOrderId and zohoPurchaseOrderNumber.

Recommended matching rule

Local Item -> Zoho Item matching priority:

1. Exact BCN/SKU match. 2. Exact normalized item name. 3. HSN + rate + unit. 4. Manual choice if confidence is low. 5. Create new Zoho item only if no confident match exists.

Key local fields

- stocks.totalQty, availableQty, reservedQty, damagedQty, cutQty
- orders.sections.NORMAL.items[].allocation.lengths[].lengthId
- orders.sections.NORMAL.items[].allocation.lengths[].stockItemId
- invoices.zohoCustomerId, zohoInvoiceId, zohoInvoiceNo
